

South Kashima Power Plant Inc. Environmental Policy

Basic Policy

South Kashima Power Plant Inc. recognizes that the most important responsibility is to provide safe, stable, and secure utility supply, and to achieve this, we will pursue global environmental and business sustainability in a consistent manner.

Further, it also gives consideration to the preservation of the local environment and being harmonious with the local community.

Action Guidelines

1. Promote efficiency improvements by introducing the latest equipment, and taking on the challenge of achieving a society that moves from low carbon to decarbonization.
2. Aim to become a recycling-oriented society through resource savings, energy saving, waste reduction and recycling.
3. Be compliant with relevant environmental laws, regulations, agreements, etc. and not overlook any breaches of the same.
4. Ensure that employees have sufficient education, training, enlightenment, and communication. Create a vibrant, safe and secure work environment.
5. Implement environmental goals for each fiscal year and review as necessary in response to changes in internal and external circumstances.
6. Maintain and improve the environmental management system, continuously improve the global and local environment, and strive to prevent contamination.
